BRICSCAD

1 program on 4 CAD platforms is impossible

Innovative and International

AX3000 is the result of more than 35 years of experience as CAD-market leader in building technology. It was the first CAD-program specially developed for the daily requirements in building technology and supports you competent at project processing starting with project planning, via construction till manufacturing. AX3000 is available in many languages and it supports all common standards (EU, DIN, ÖNORM, GOST, Ashrae Standards). This makes possible cross-border collaboration in the EU and beyond..

Continuous Handling

The modular buildup of AX3000 offers you comfortable specific solutions for the trades Heating, Ventilation, Sanitation and Electrics. The easy operation method is the same for all trades. Your benefit: short training times, continuous handling, fast results.

Specific Functions

Simple line commands create complex systems

Comfortable planning of all trades in 3D

Intuitive construction assistants and modification functions

Plausibility checks ensure planning security

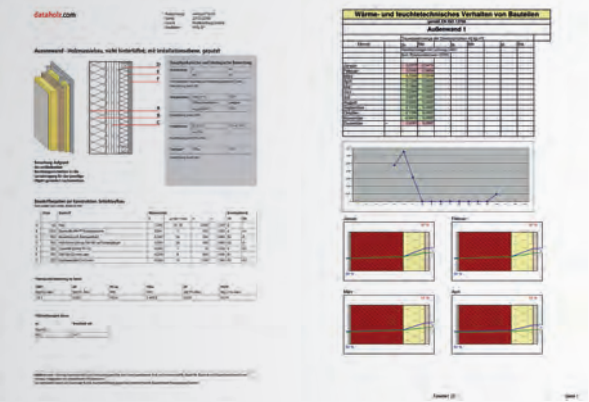

Extensive article database which can easily be extended by the customer

With AX3000 you are able to plan and construct directly in your CAD environment

125m

BUILDING PHYSICS

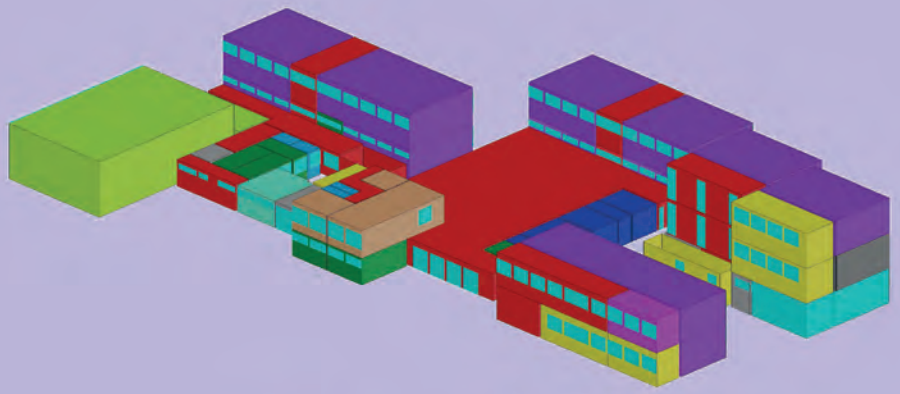

~~... is time-consuming~~

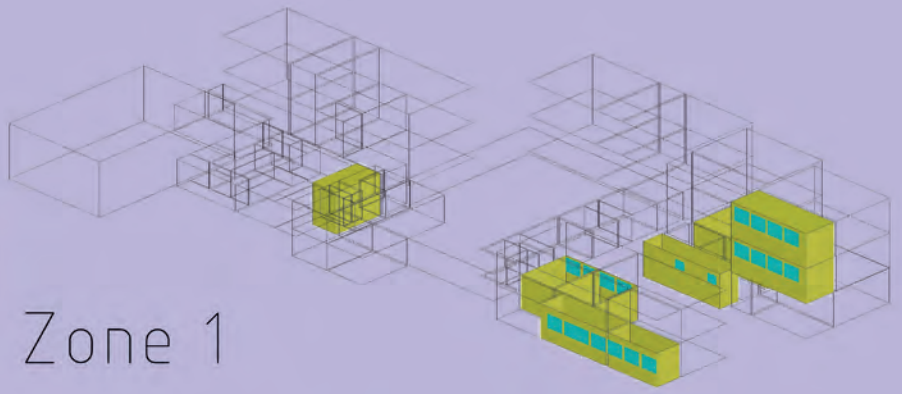

The meaning of building physics considerable increased within the last decades. Intensified efforts at the heat insulation of buildings result in a stronger comprehension of buiding physical considerations in the planning of them.
Another focus of the building physics is the realisation of the sound insulation of flats and buildings.
AX3000 supports you with experience and know-how at the calculation of building- and construction behaviour in relation to the different aspects of building physics.
The sound calculation directly from the virtual building model and the Glaser diagram reasonable extend the functionality.

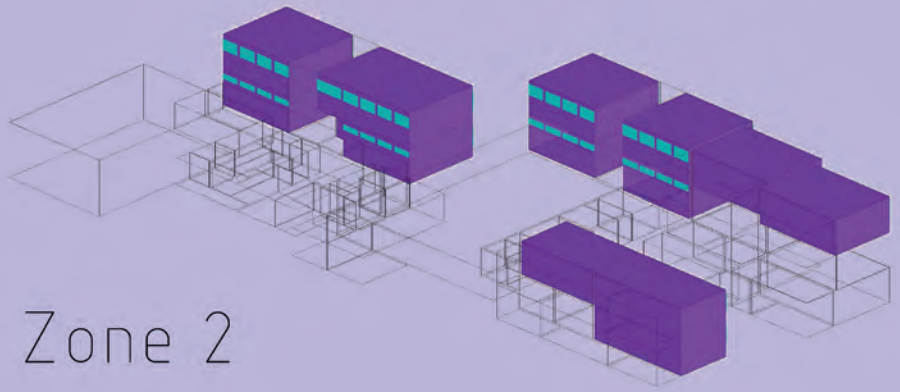

Your advantages at a glance:

Decades of experience in the field of building physics
Automatic determination of building physics out of 3D building model
Sound calculation / Glaser diagram
Import of building material data

ENERGY CERTIFICATE

~~... is complicated~~

AX3000 energy certificate offers

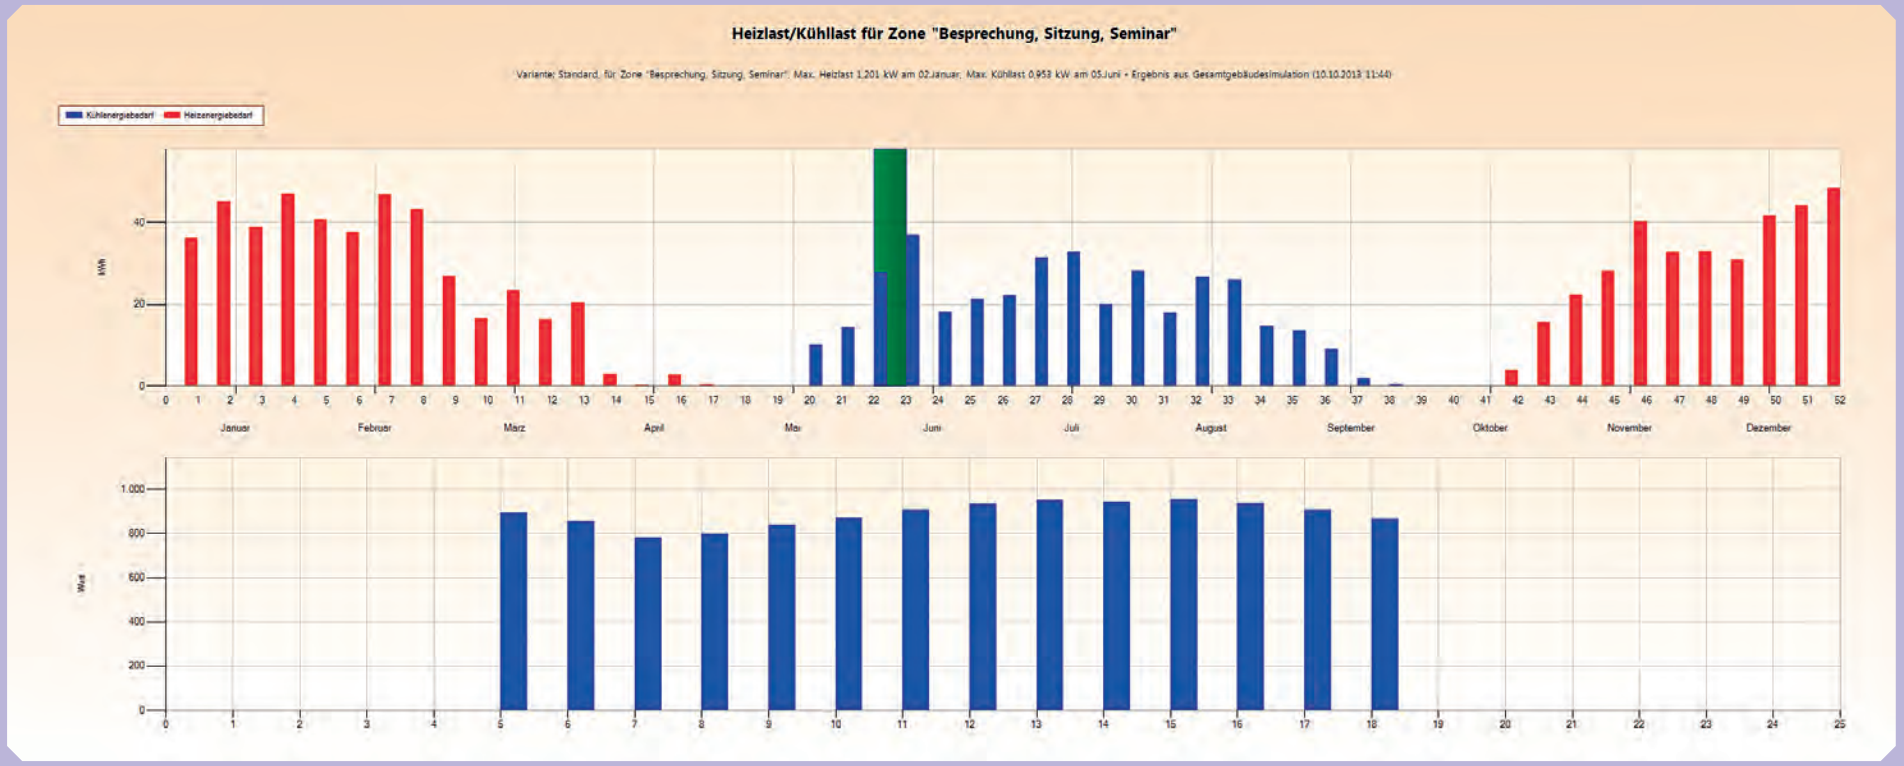

Geometrics transfer directly from your CAD environment at the push of a button
Variant comparison for optimisation
Easiest zoning solution on the market
Conforming to standards calculation for residential- and non residential buildings
Flexible analysis possibilities in Word, Excel, PDF, XML, DENA,...
Country specific electronic data transmission

In AX3000-Energy certificate considered standards:

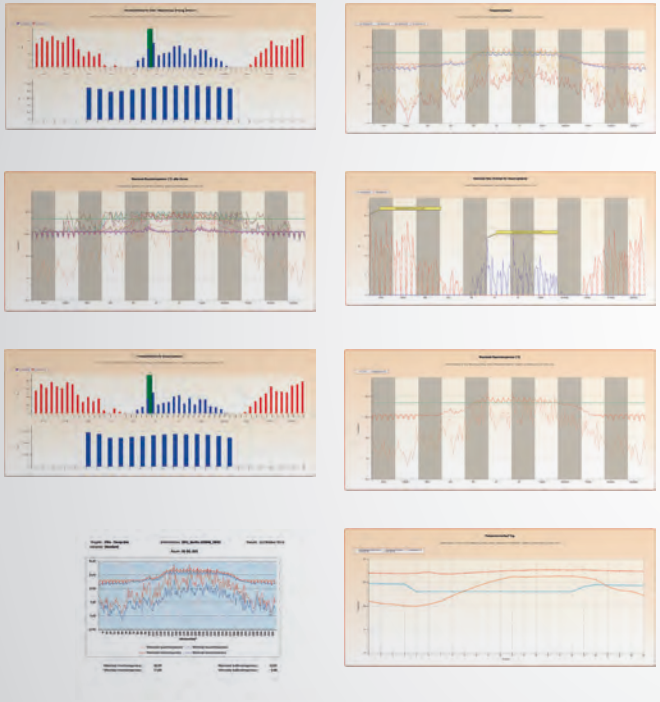

DIN EN ISO 13788 Hygrothermal performance of building components
DIN EN ISO 6946 Thermal resistance and thermal transmittance
DIN EN ISO 13790 Calculation of energy use for space heating and cooling
DIN V 4108-6 Calculation of annual heat and energy use
DIN 4701-10 Energy efficiency of heating and ventilation systems in buildings
DIN V 18599-1 bis 10 Determination of annual primary energy demand
EEWärme G Act on the Promotion of renewable energies in the heat sector
DIN 4109 und DIN EN 12354-1 Sound insulation in building construction

OIB - Guideline 6 - Energy saving ordinance and thermal insulation

ÖNORM B8110-5 – Thermal Insulation in Building Construction – climate model and usage profiles
ÖNORM B8110-6 – Thermal Insulation in Building Construction – Heating and cooling demand
ÖNORM H5056 – Heating technology-Energy demand
ÖNORM H5057 – Air-conditioning technology-Energy demand for Residential- and non residential buildings
ÖNORM H5058 – Cooling technology-Energy demand
ÖNORM H5059 – Illumination-Energy demand

Heizlast/Kühllast für Zone "Besprechung, Sitzung, Seminar"
Variante: Standard, für Zone "Besprechung, Sitzung, Seminar": Max. Heizlast 1,201 kW am 02.Januar, Max. Kühllast 0,953 kW am 05.Juni - Ergebnis aus Gesamtgebäudesimulation (10.10.2013 11:44)

... cost time and money

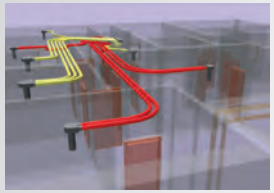

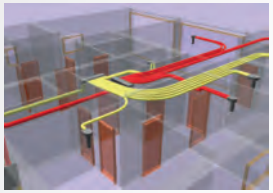

Dynamic simulations based on hourly weather data – worldwide! Automatic use of zone and systems definitions from energy certificate.

Your advantages at a glance

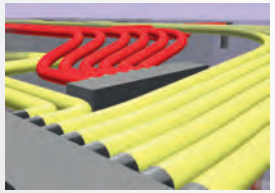

- Freely definable profiles for occupancy, heating and cooling times
- Consideration of internal loads
- Consideration of building orientation
- Consideration of partial cooling and partial loads
- Shows effects of shading by the construction and/or location
- Calculates room and zone temperatures for any desired number of days a year
- Calculates and compares freely definable, independent variants
- Calculates room and zone temperatures in the course of a year or a day
- Dynamically calculates cooling and heating load
- Graphical analyses

... is ~~not~~ planned quickly

With the ventilation concept module in accordance with DIN 1946-6 and systems dimensioning, we offer you an innovative and universal planning tool.

The easy user guidance allows you to create a ventilation concept for single-family homes as well as multi-floor buildings based on ventilation units, which enables you to generate a sector plan for controlled residential ventilation – and that's exactly what integral designing is all about.

AX3000 Residental Ventilation 1946 - that's how ventilation professionals plan today!

Your advantages at a glance

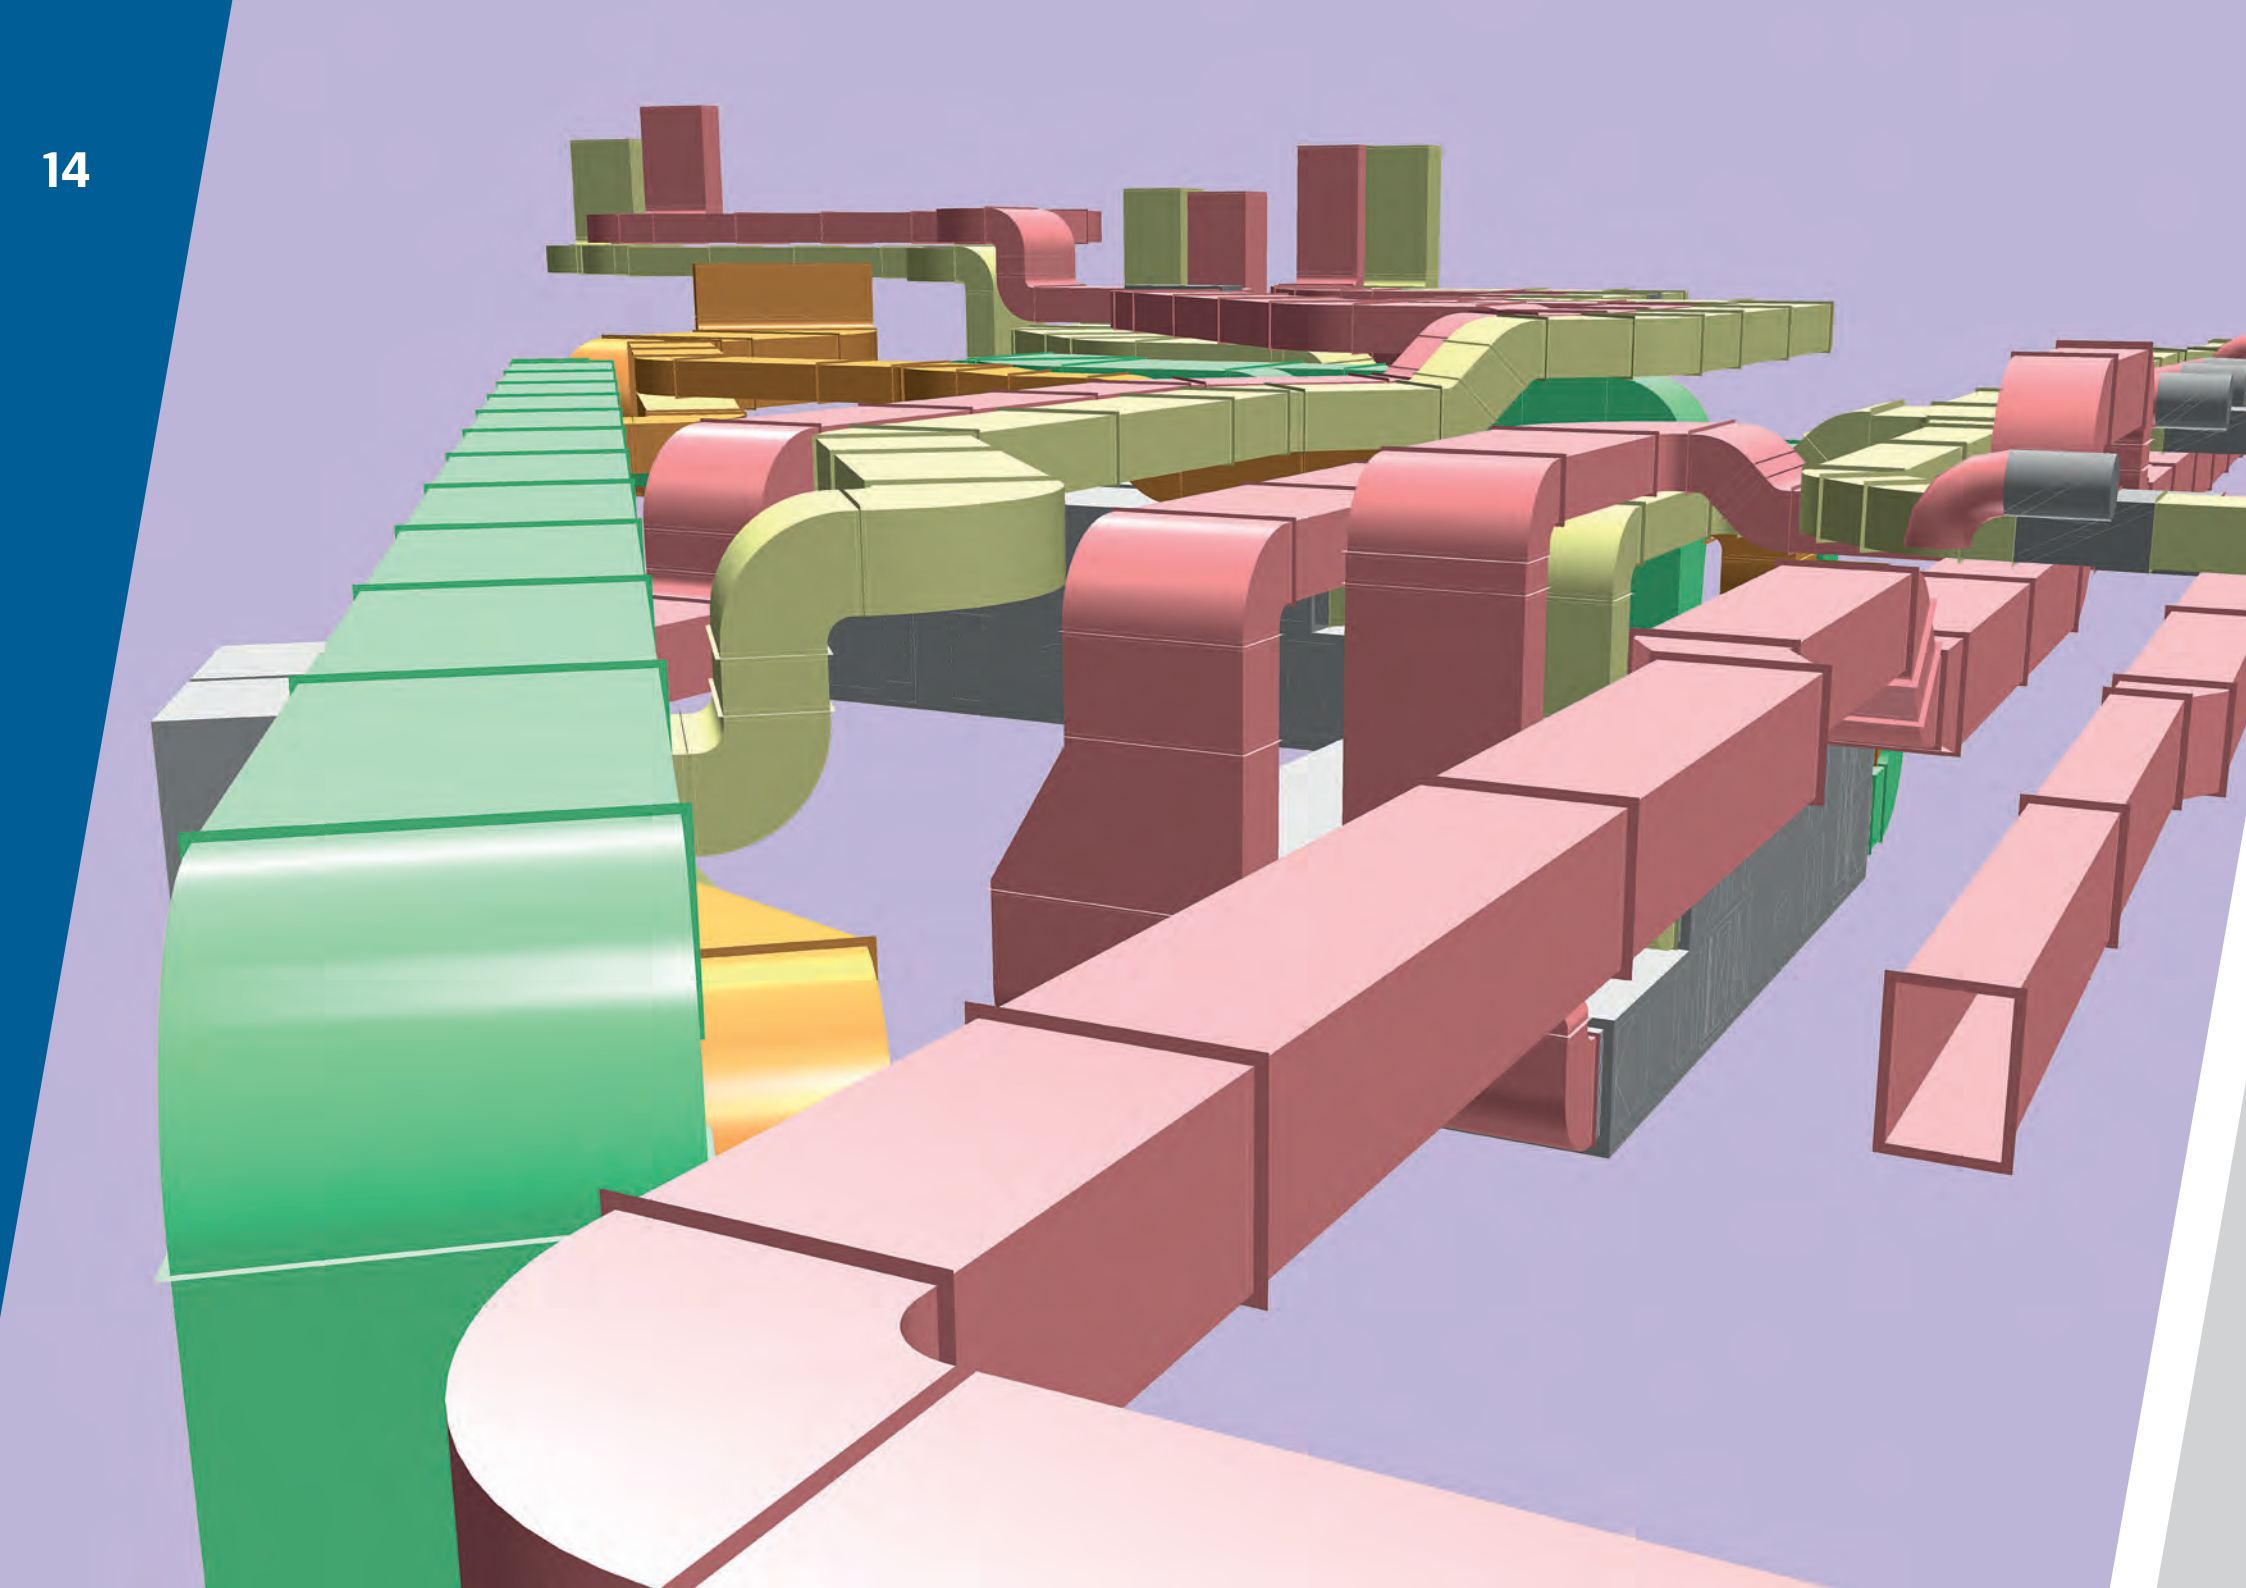

Extremely user-friendly interface

Create projects quickly and efficiently without any time-consuming training

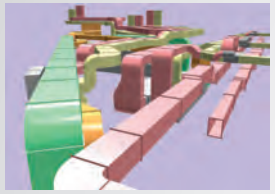

Extensive construction component library for 3D planning

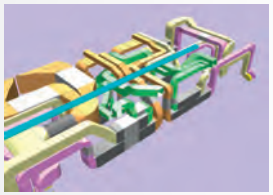

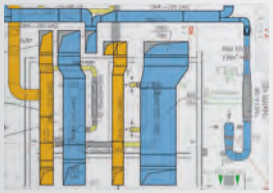

Use flexible and oval pipes as well as pipes with different cross sections

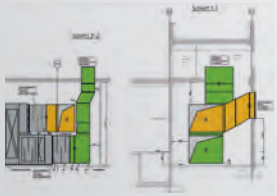

Flexible visualisation possibilities

... is ~~not~~ easily to coordinate

The ventilation module is an intuitive tool to smartly create detailed implementation and installation plans. It has been used in the field for many years and this experience leads to constant improvements.

In addition to the construction mode, you can use the Easyline system for fast planning, allowing you to design complex 3D systems with simple line-based designs.

The two systems can be combined in any way you choose!

With this and the collision check for different construction aspects you will be able to master even the toughest of situations.

Get a quick overview of the flow rates with the integrated calculations and visualisation of pressure loss. Temperature drops and sound can also be calculated..

Your advantages at a glance

Create detailed implementation and installation plans easily and efficiently

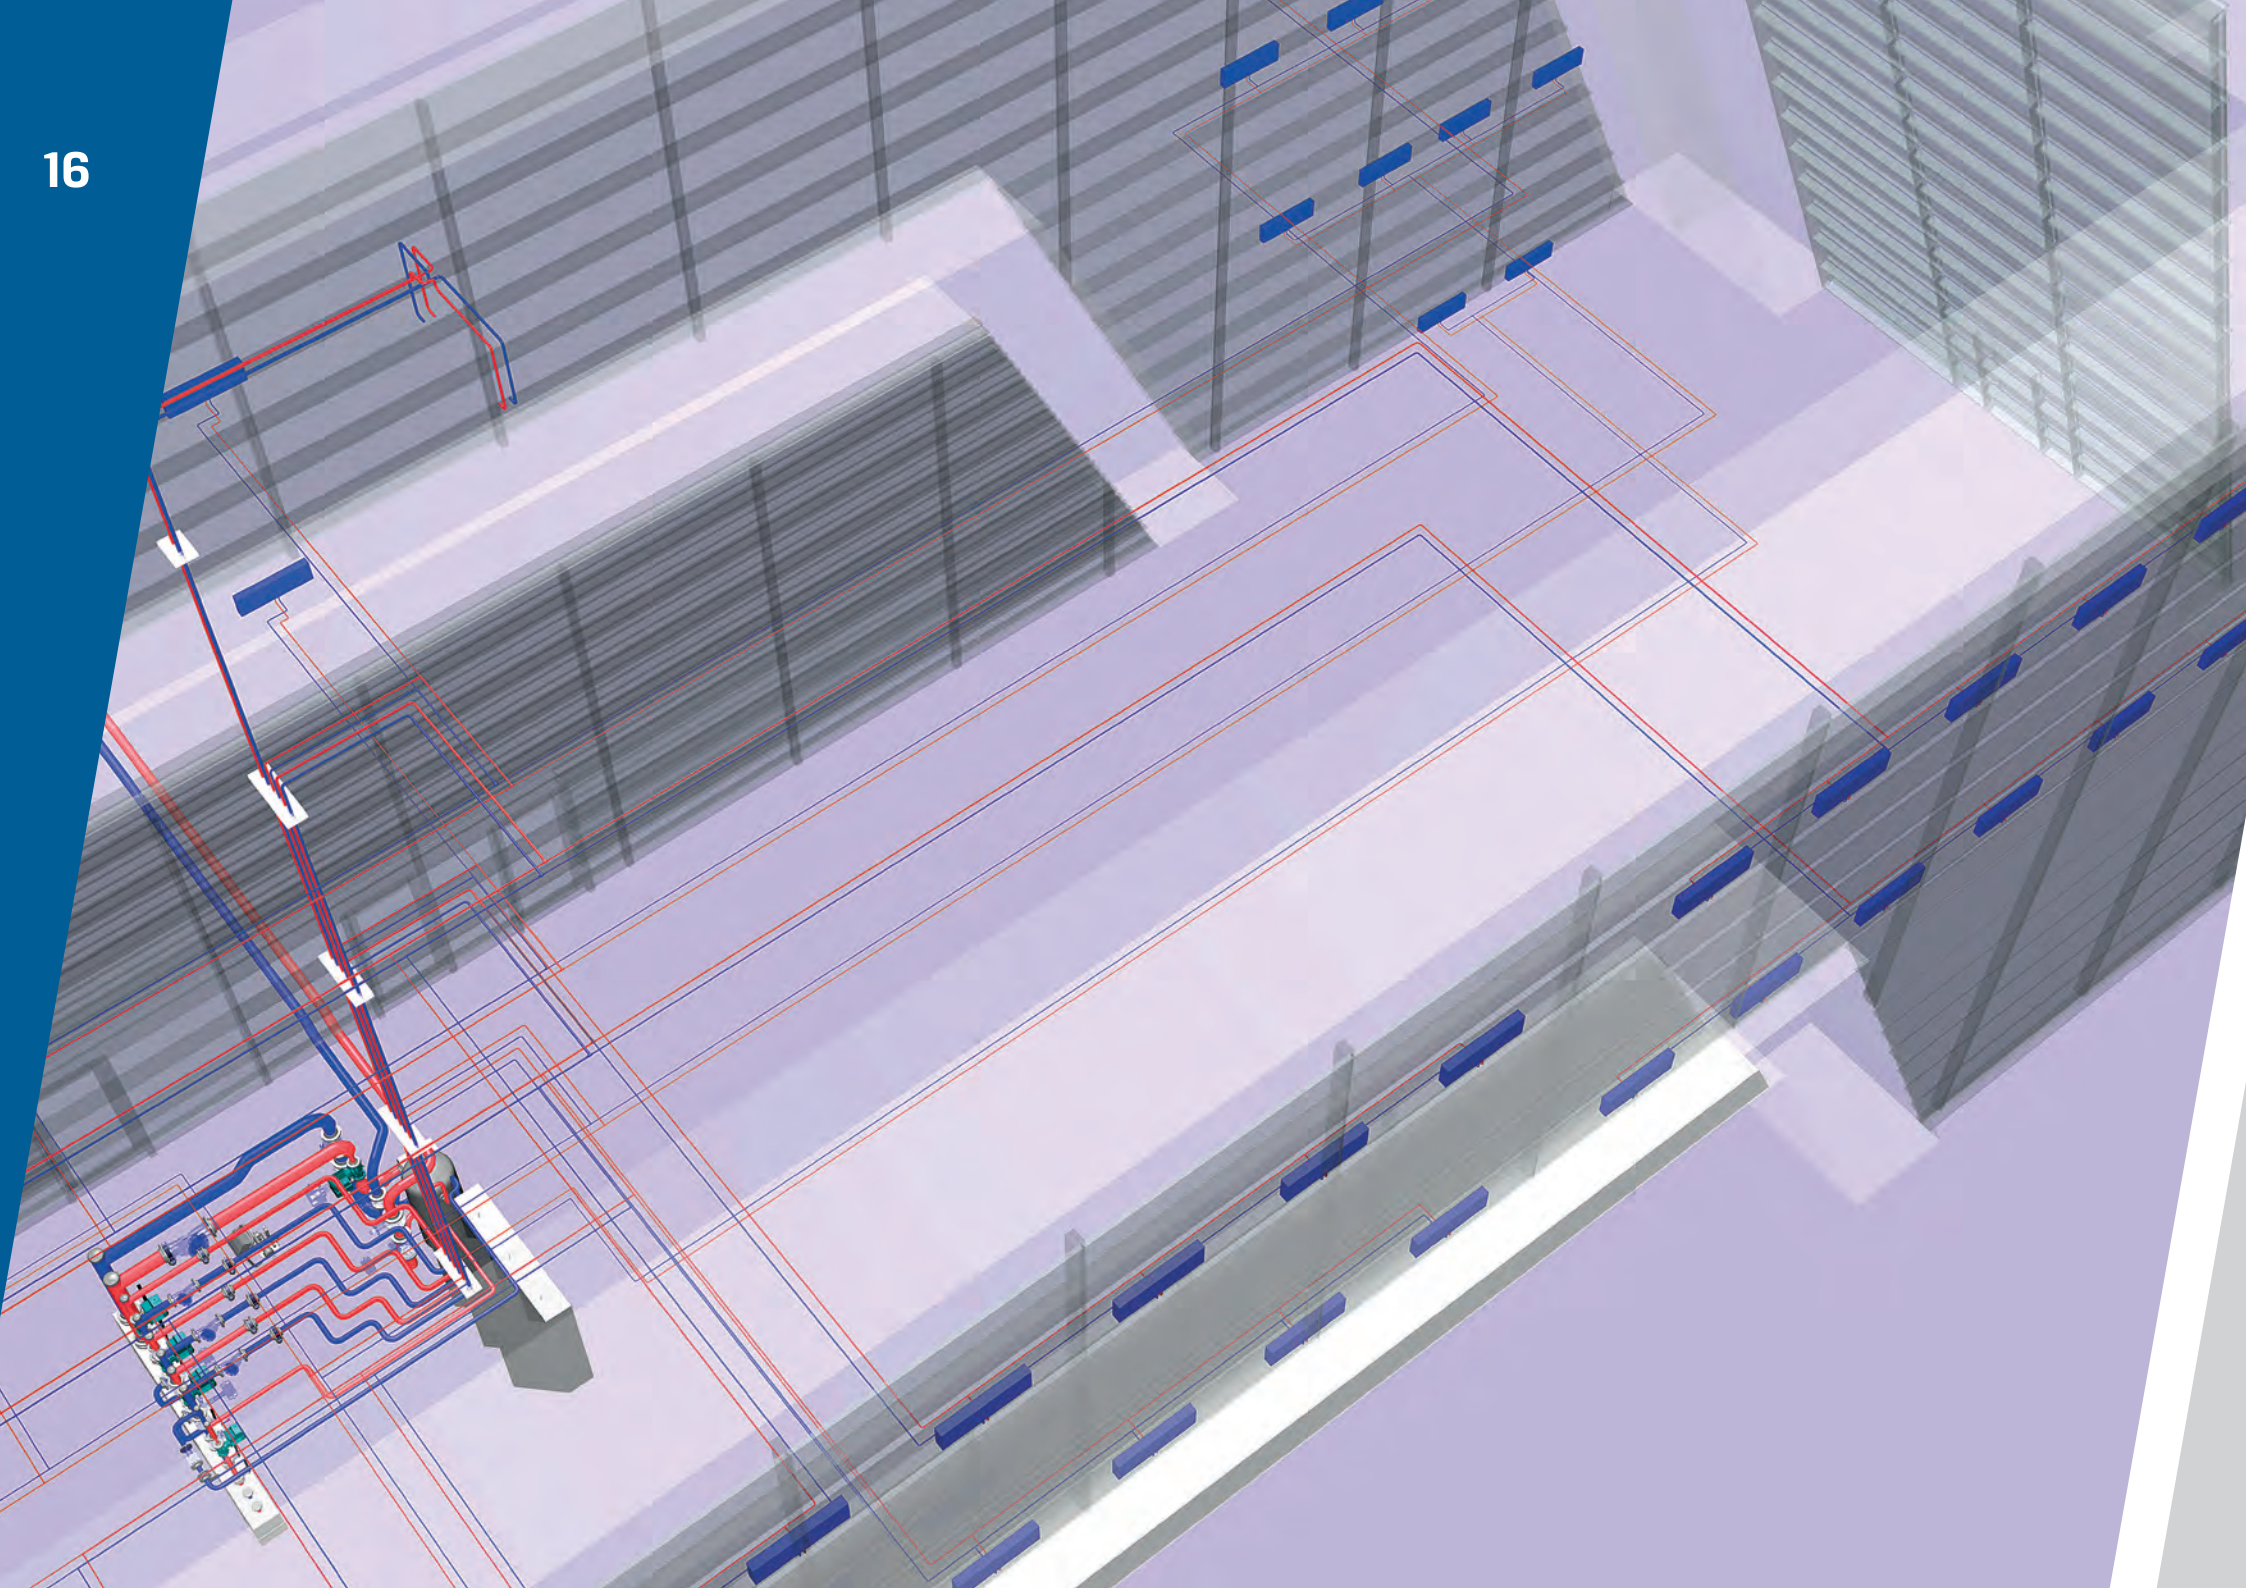

Plan projects and calculate variants

Extensive 3D libraries and manufacturer databases

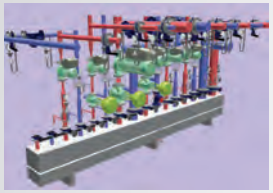

Different construction modes even for the most difficult installation situations

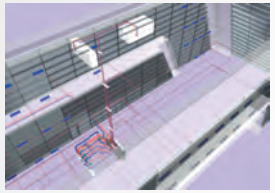

Automatically create profiles, 2D drawings and isometries

Extensive dimension calculations and visualisation possibilities

... ~~is adjusted at construction site~~

Design even complex systems effortlessly with our heating module. The planning is based on piping network calculations which AX3000 completes automatically using pre-defined parameters.

Distributor/system construction

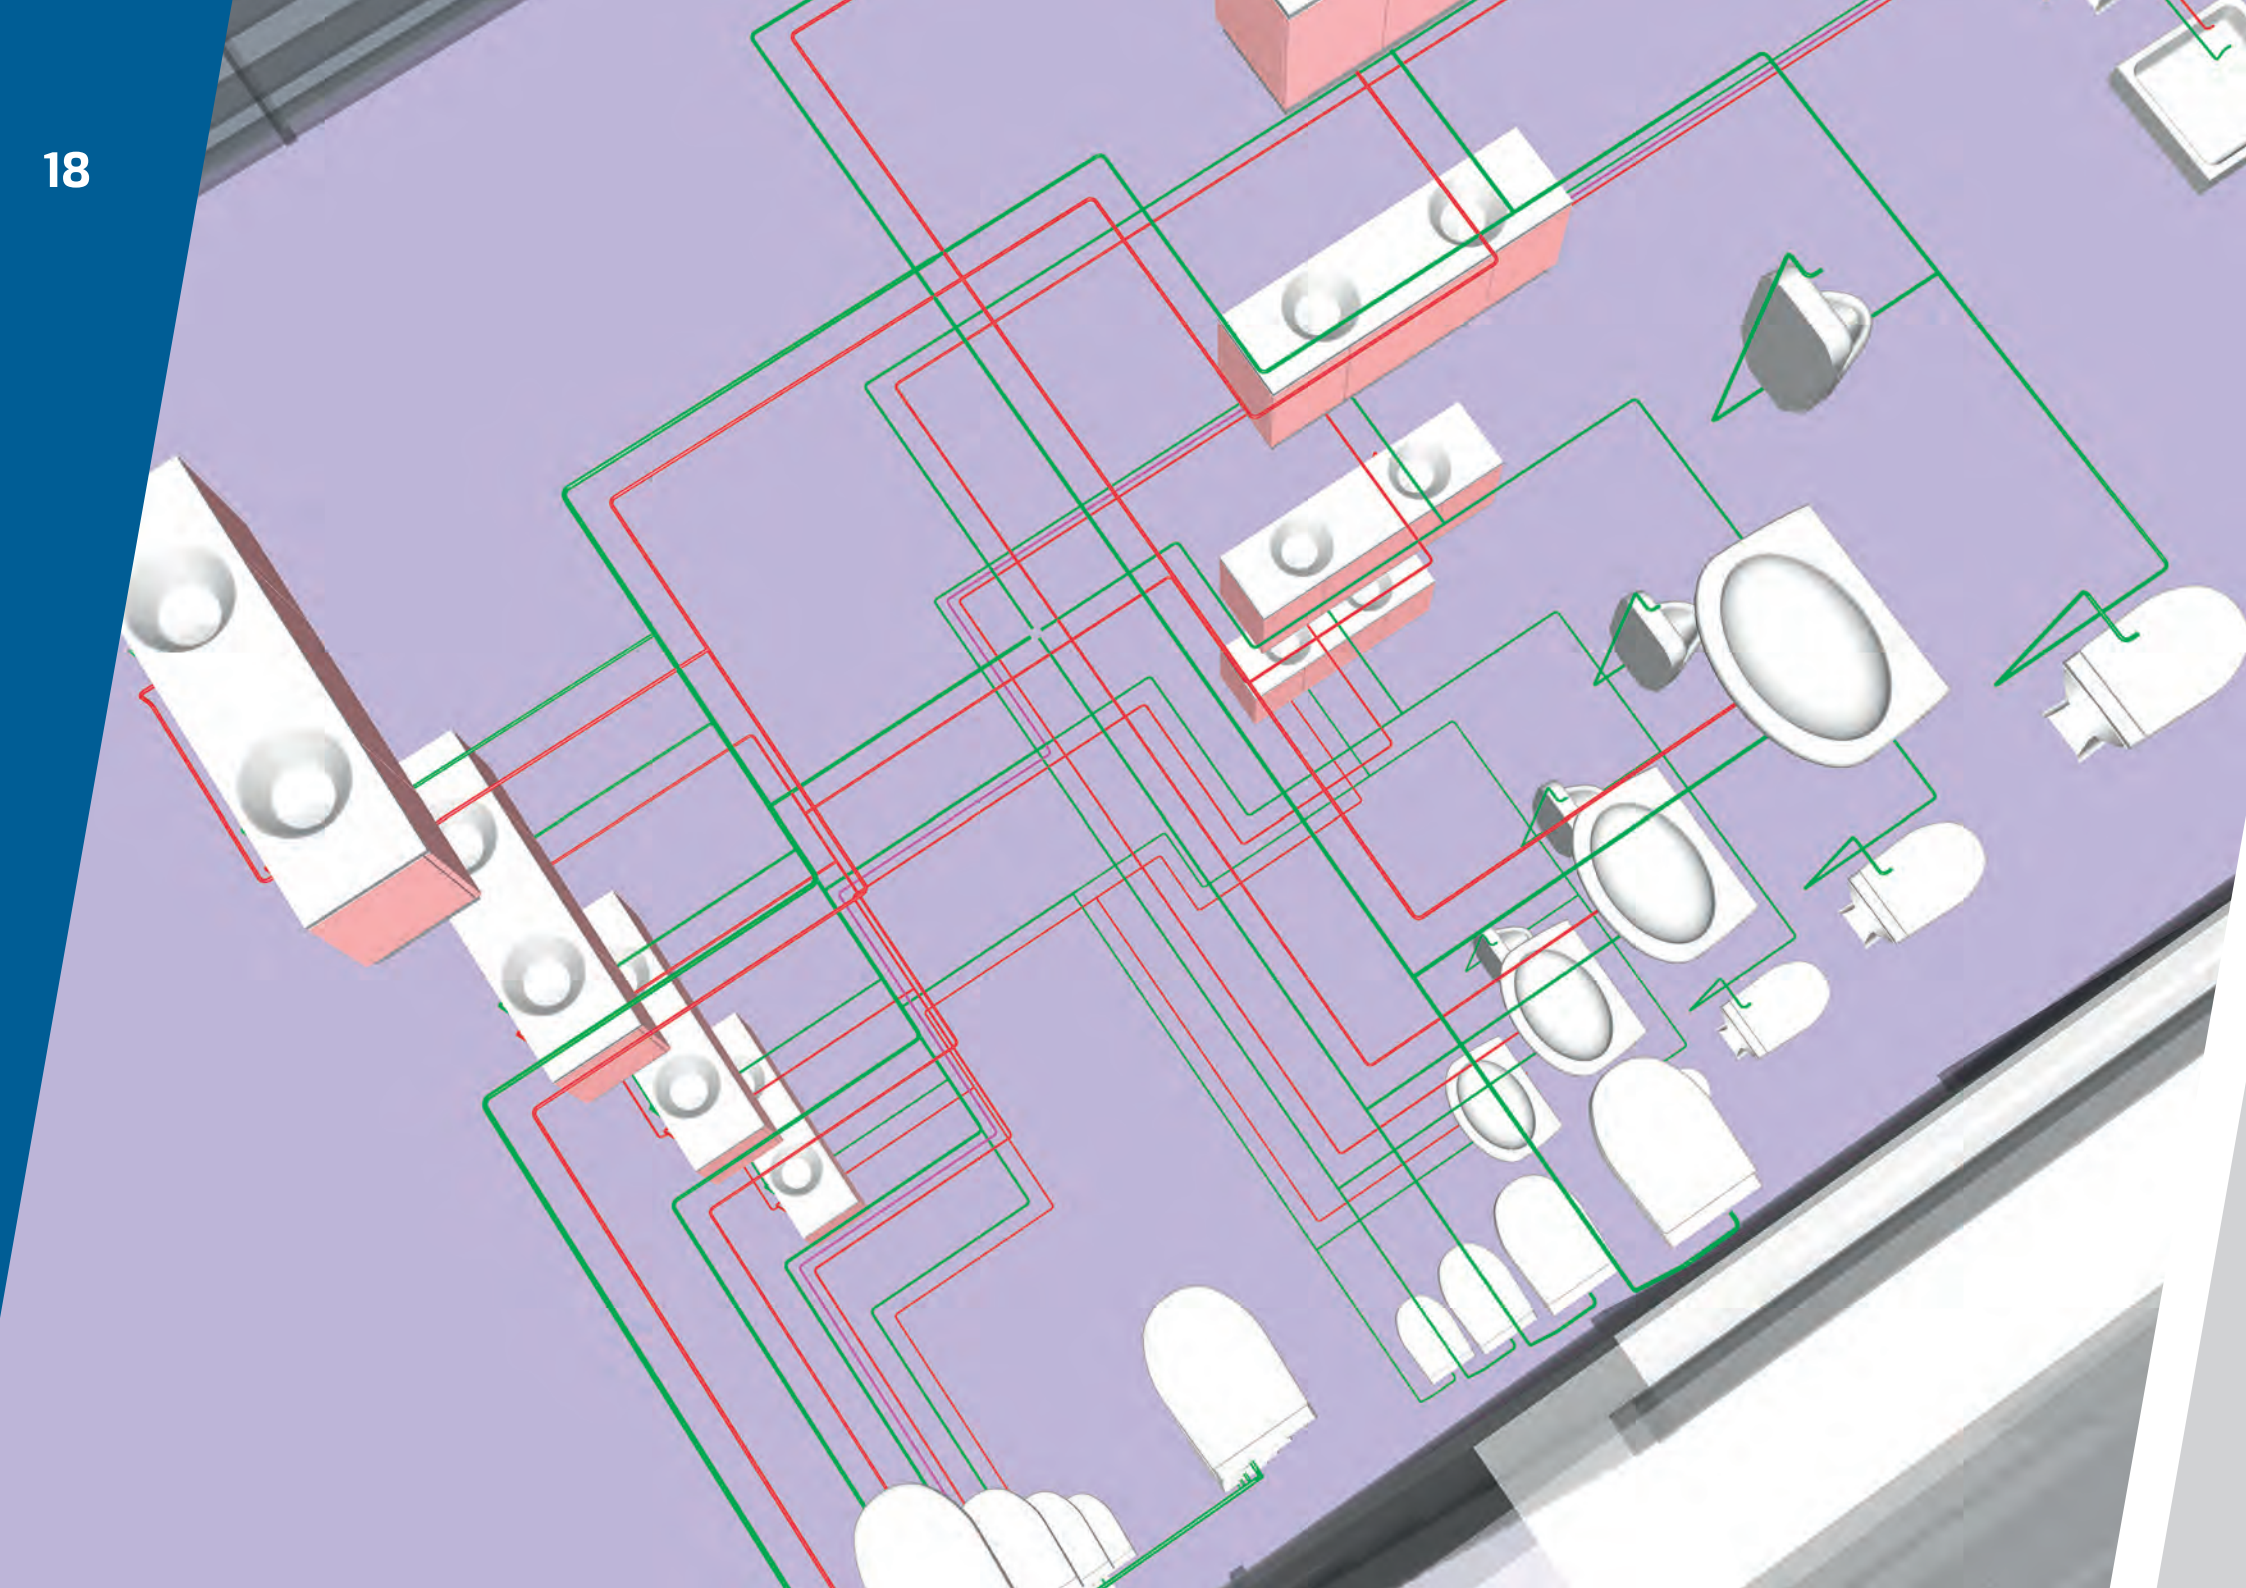

3D pipe construction
Calculate distributor diameters and positions nozzles with different dimensions
Automatically access flange tables
Pre-defined and client-specific construction groups

Calculates heat demand and comfortable warmth

Heating load according to EN 12831 and the Austrian standard ÖNORM 7500
Comfortable warmth according to VDI 6030
automatic radiator positioning and designing according to EN 442
Radiators according to VDI 3805

Heating module

Two-pipe and Tichelmann systems
Surface heating in accordance with EN 1264 and EN 15377
Easyline and construction
Automatic radiator connection
Automatic list of valve settings
Define other media – density, viscosity and heating capacity
Label diagrams (automatically or manually)
Pipe diagrams in 2D or 3D
Conduct extensive analyses

... will ~~not~~ be planned in 3D

AX3000 offers you extensive 3D libraries and manufacturer data which can be combined with your own components according to your needs. As with the heating and ventilation modules, you can choose the Easyline mode with simple CAD functions as well as extensive possibilities to calculate dimensions and generate visualisation possibilities. With the waste water module, the horizontally designed line system turns into a 3D pipe network showing gradients. Extensive 3D libraries and manufacturer databases provide realistic visualisations.

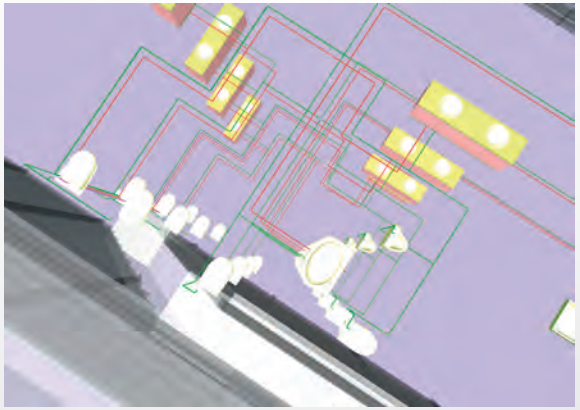

Your advantages at a glance

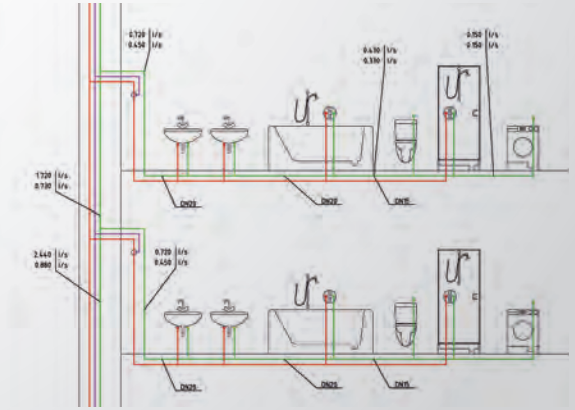

Design complex systems easily and effortlessly

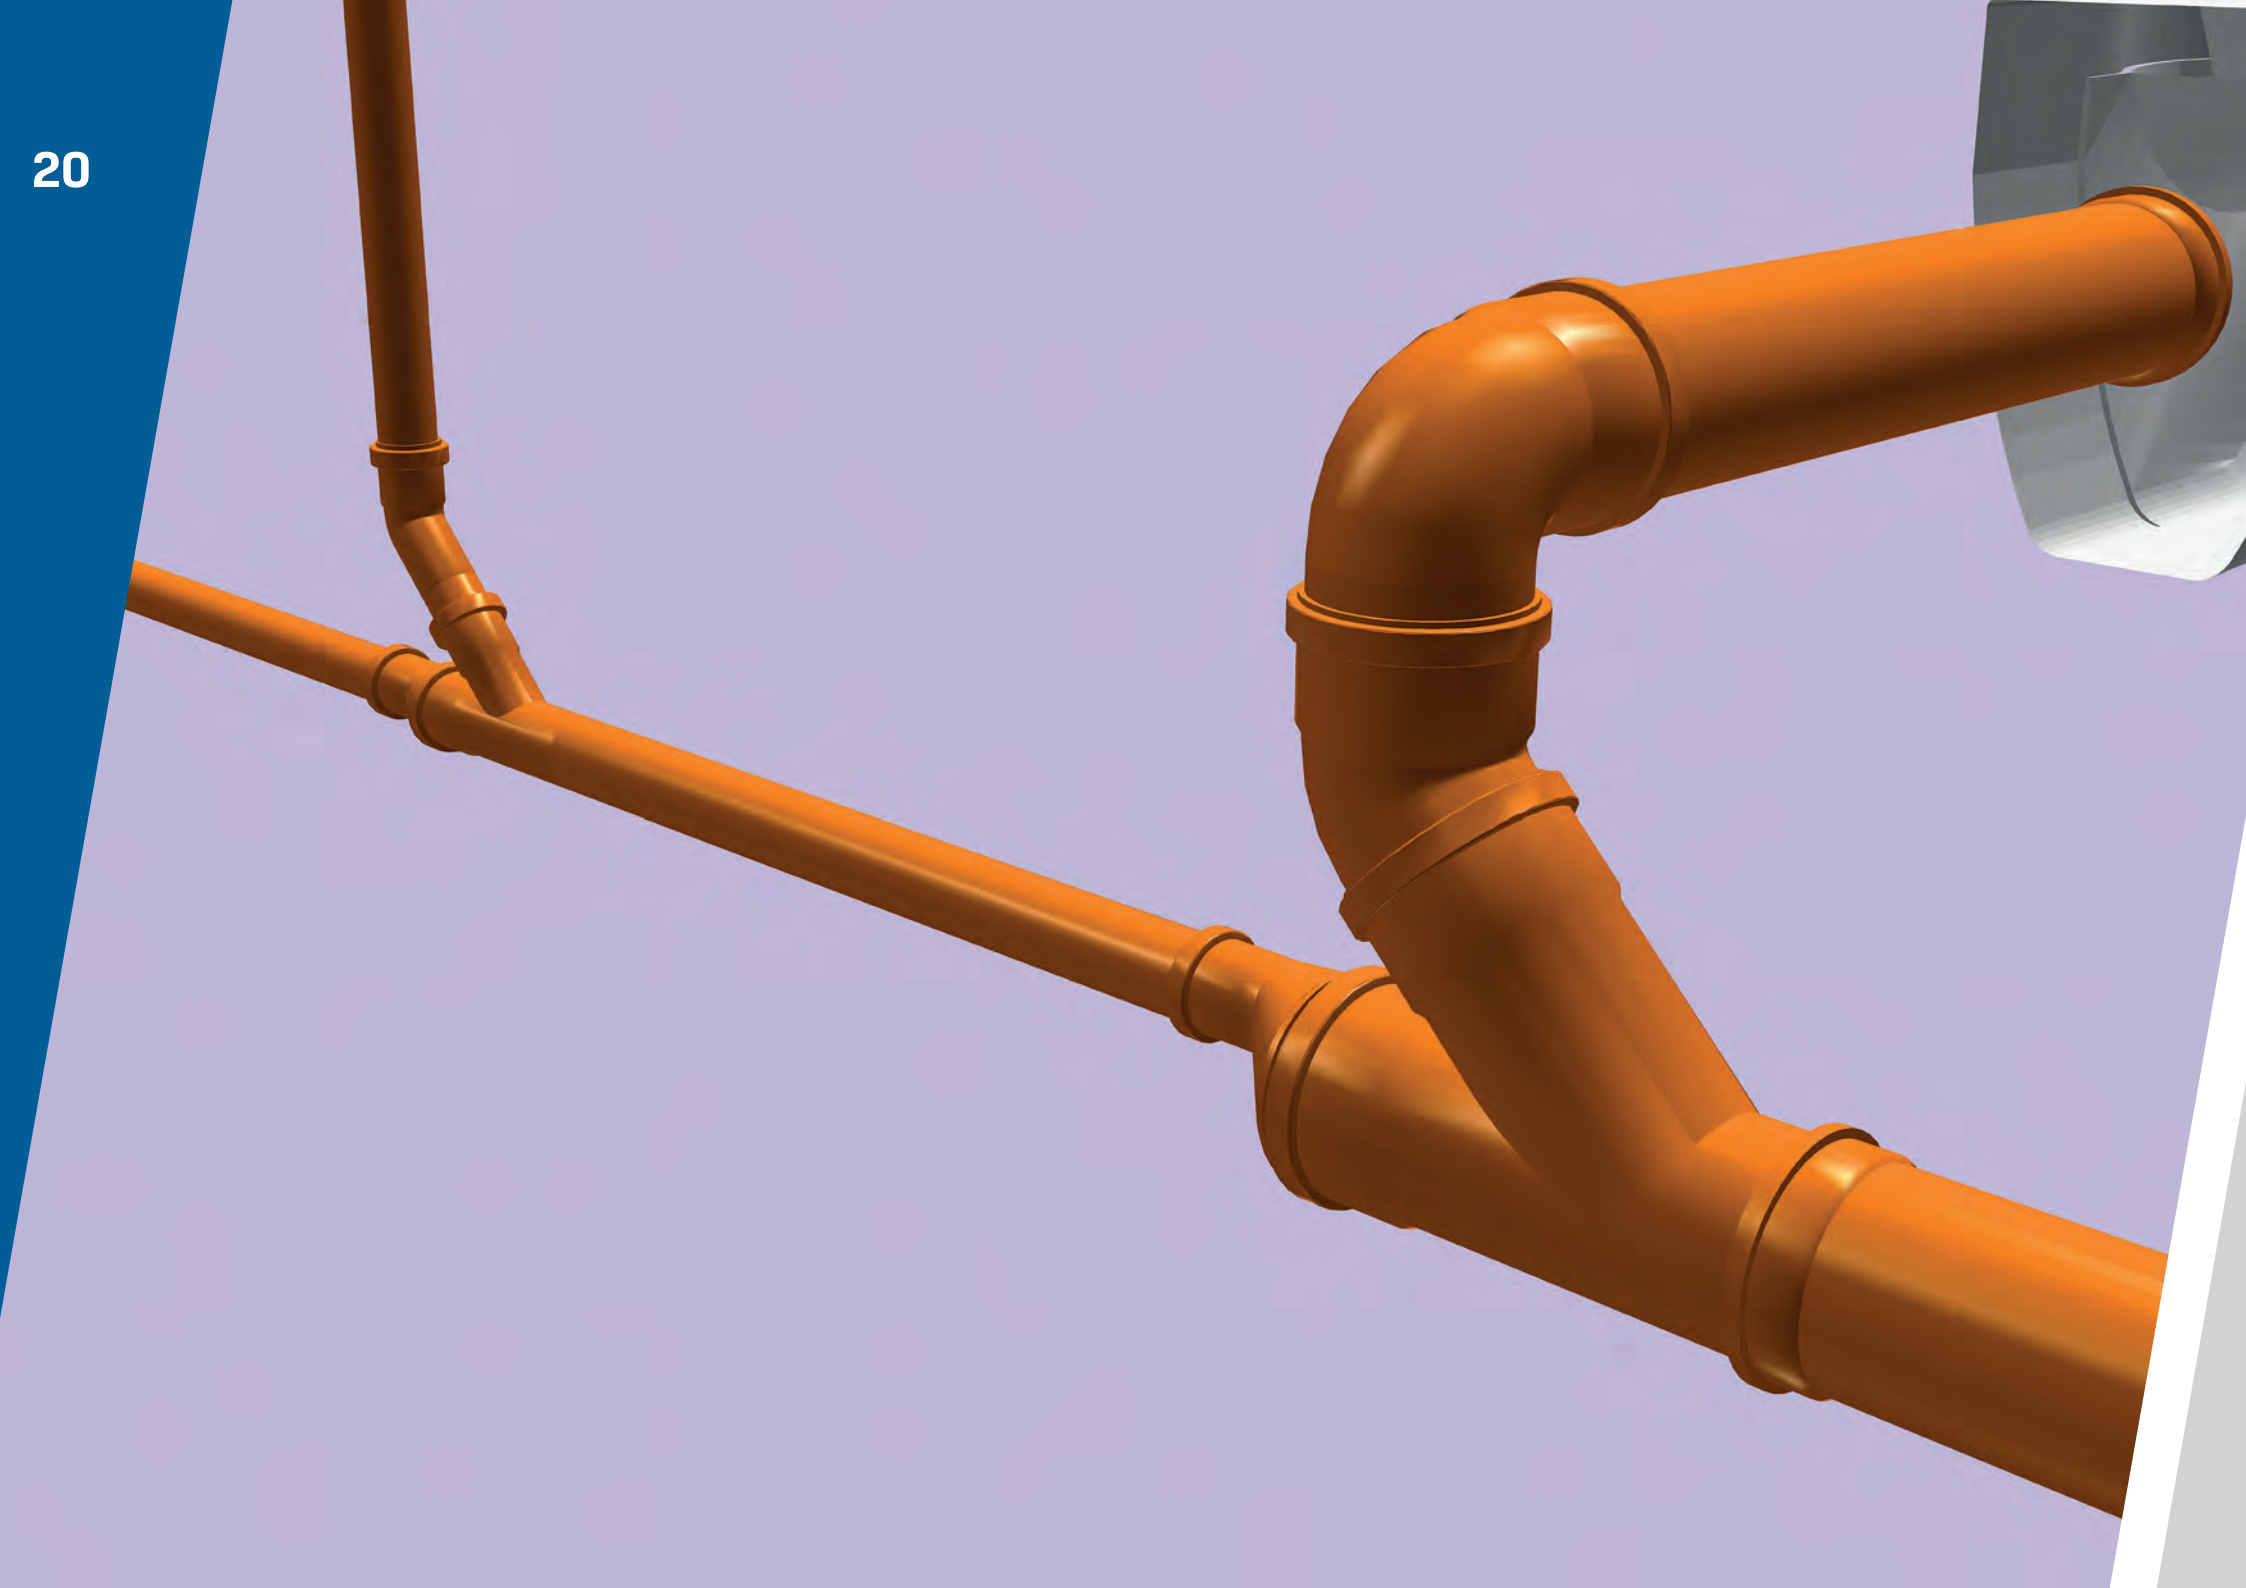

Extensive 3D libraries and manufacturer databases

Easyline mode even for the most difficult installation situations

Extensive calculations of dimensions and visualisation possibilities

~~... the gradient takes me to desperation~~

With the waste water module, the horizontally designed line system turns into a 3D pipe network showing gradients. Extensive 3D libraries and manufacturer databases provide realistic visualisations.

Your advantages at a glance

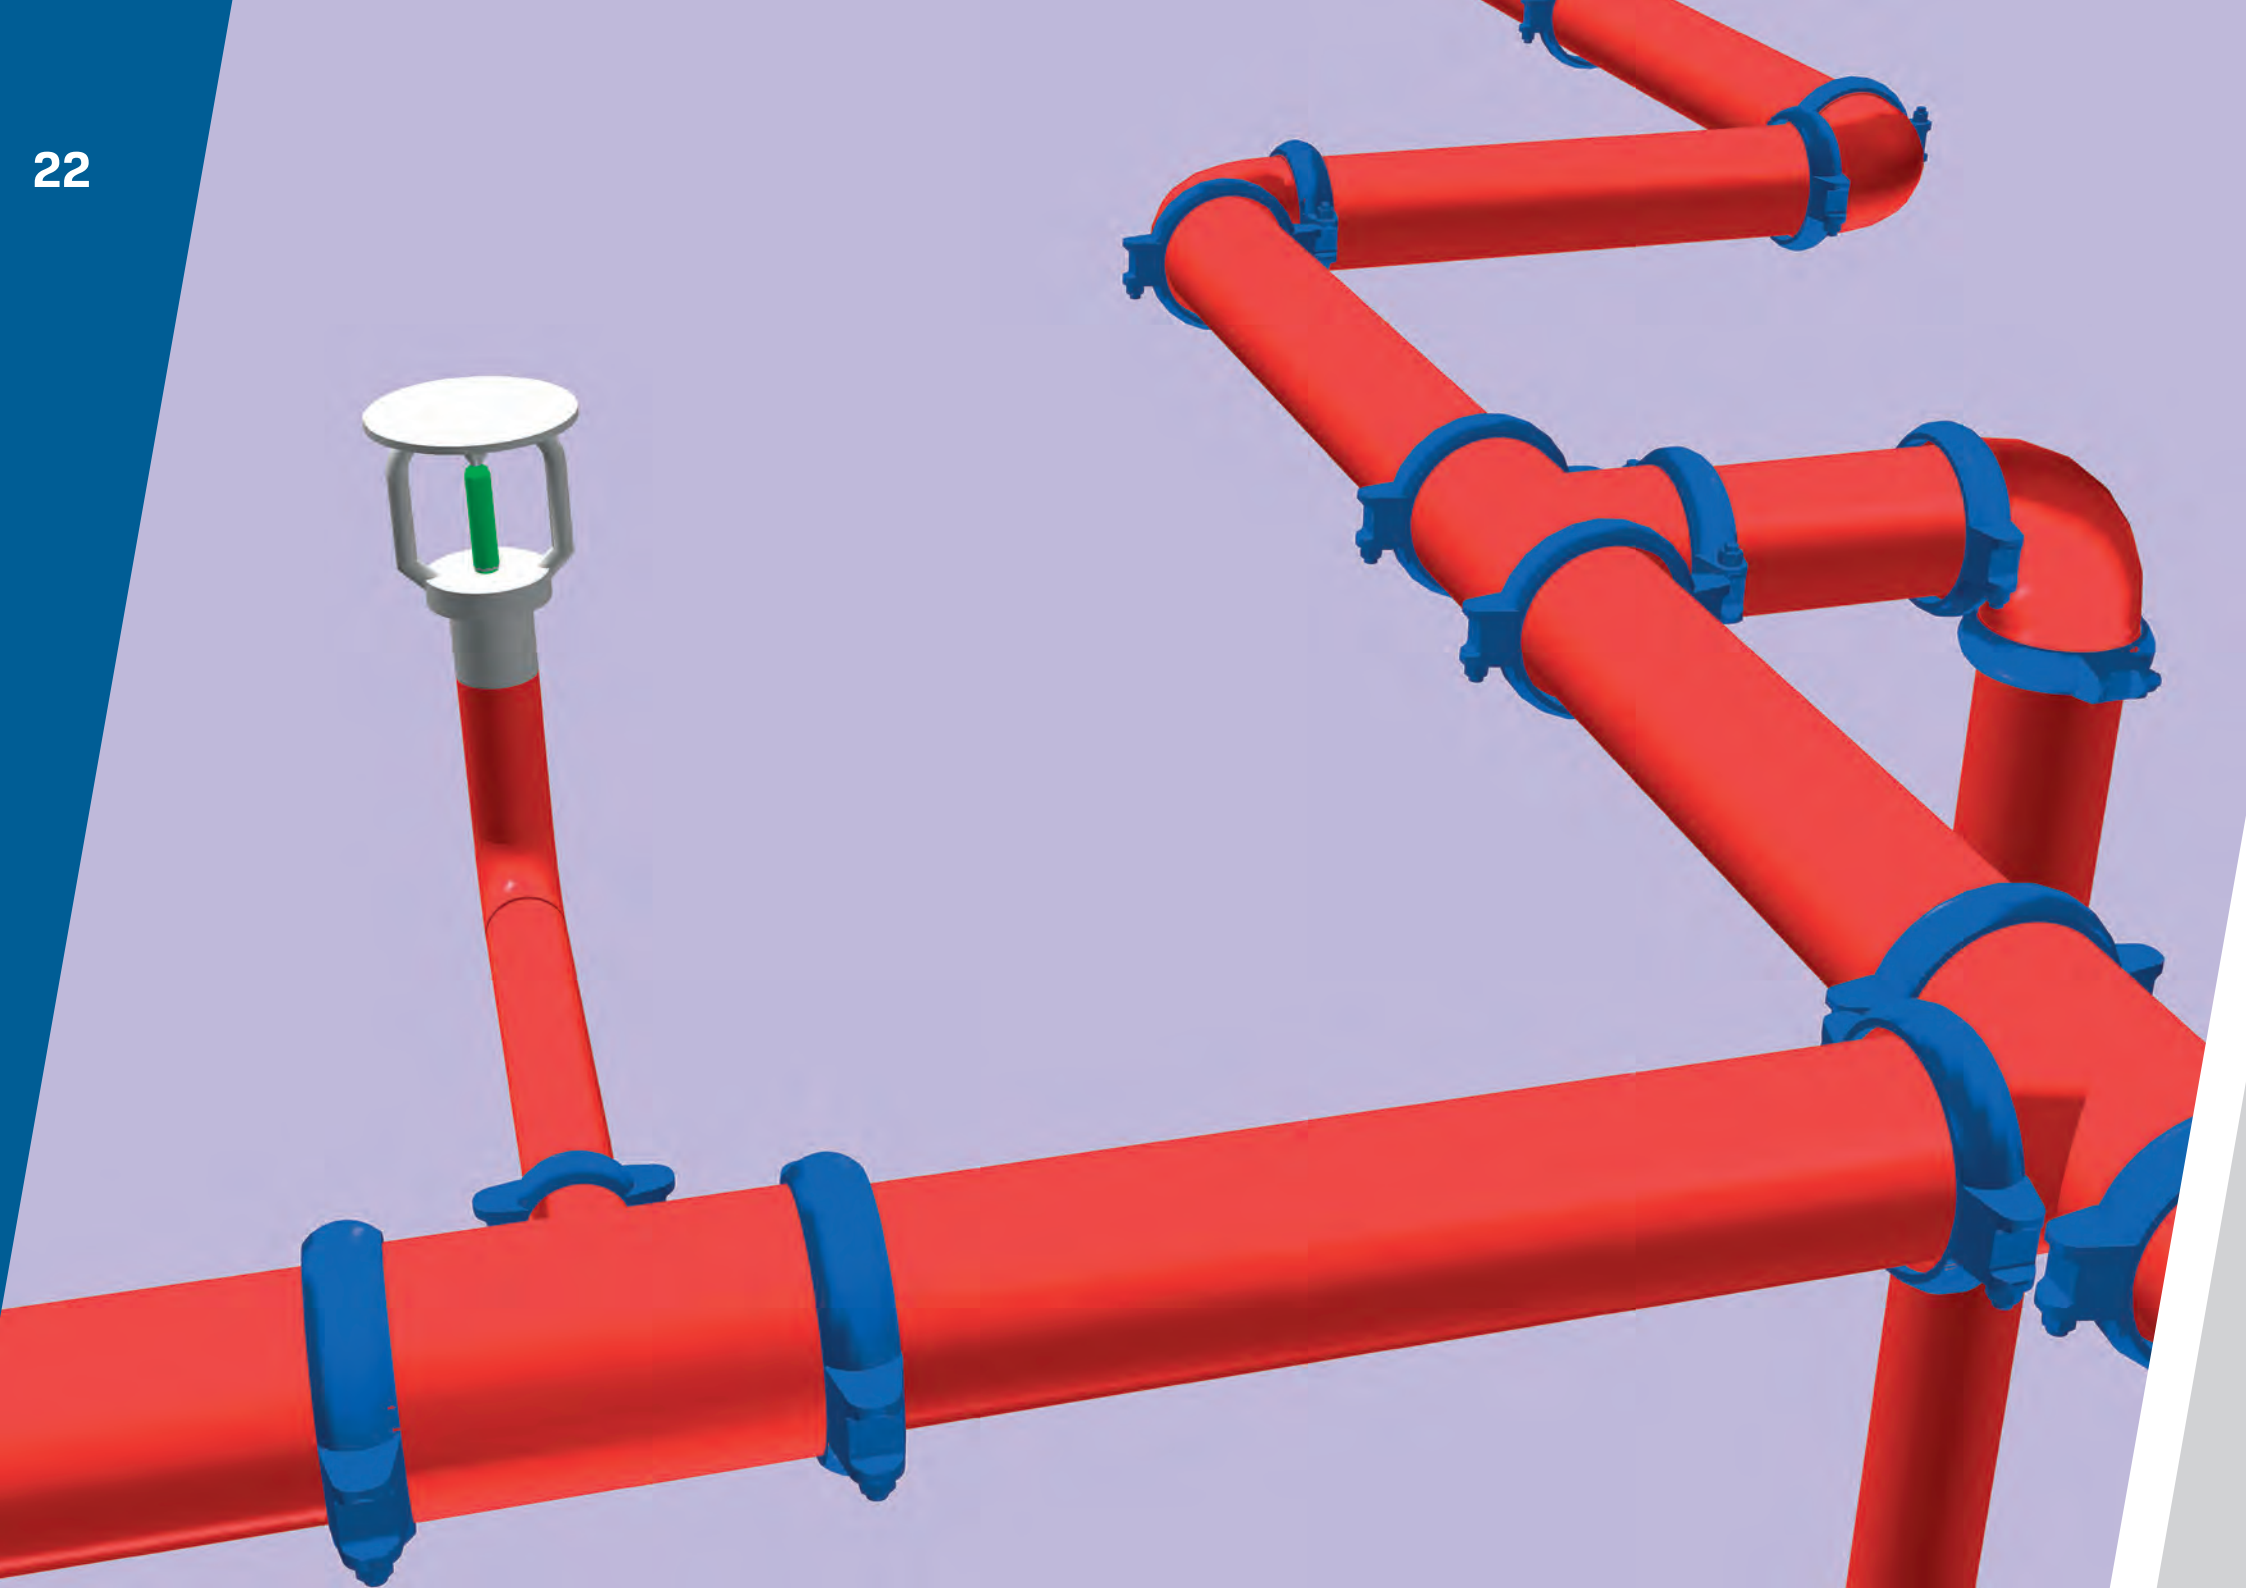

Design complex systems easily and effortlessly

Automatic connection functions for sanitary fixtures

Quickly and safely plan underground piping with and without gradients

Conduct extensive analyses and quantity surveys

... ~~No~~ planning and pre-installation

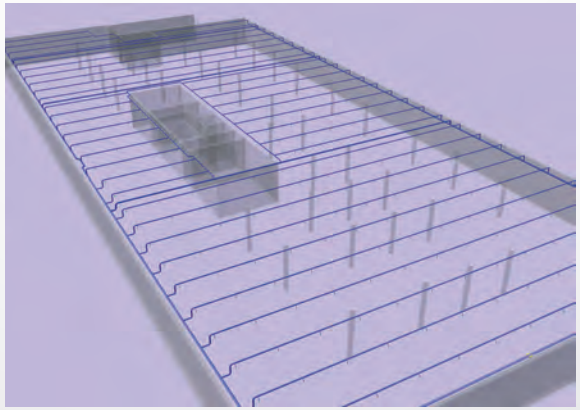

With the sprinkler module you can plan systems easily with our simple CAD functions in the Easyline mode. After dimensioning, the sprinkler network will be displayed in 3D.

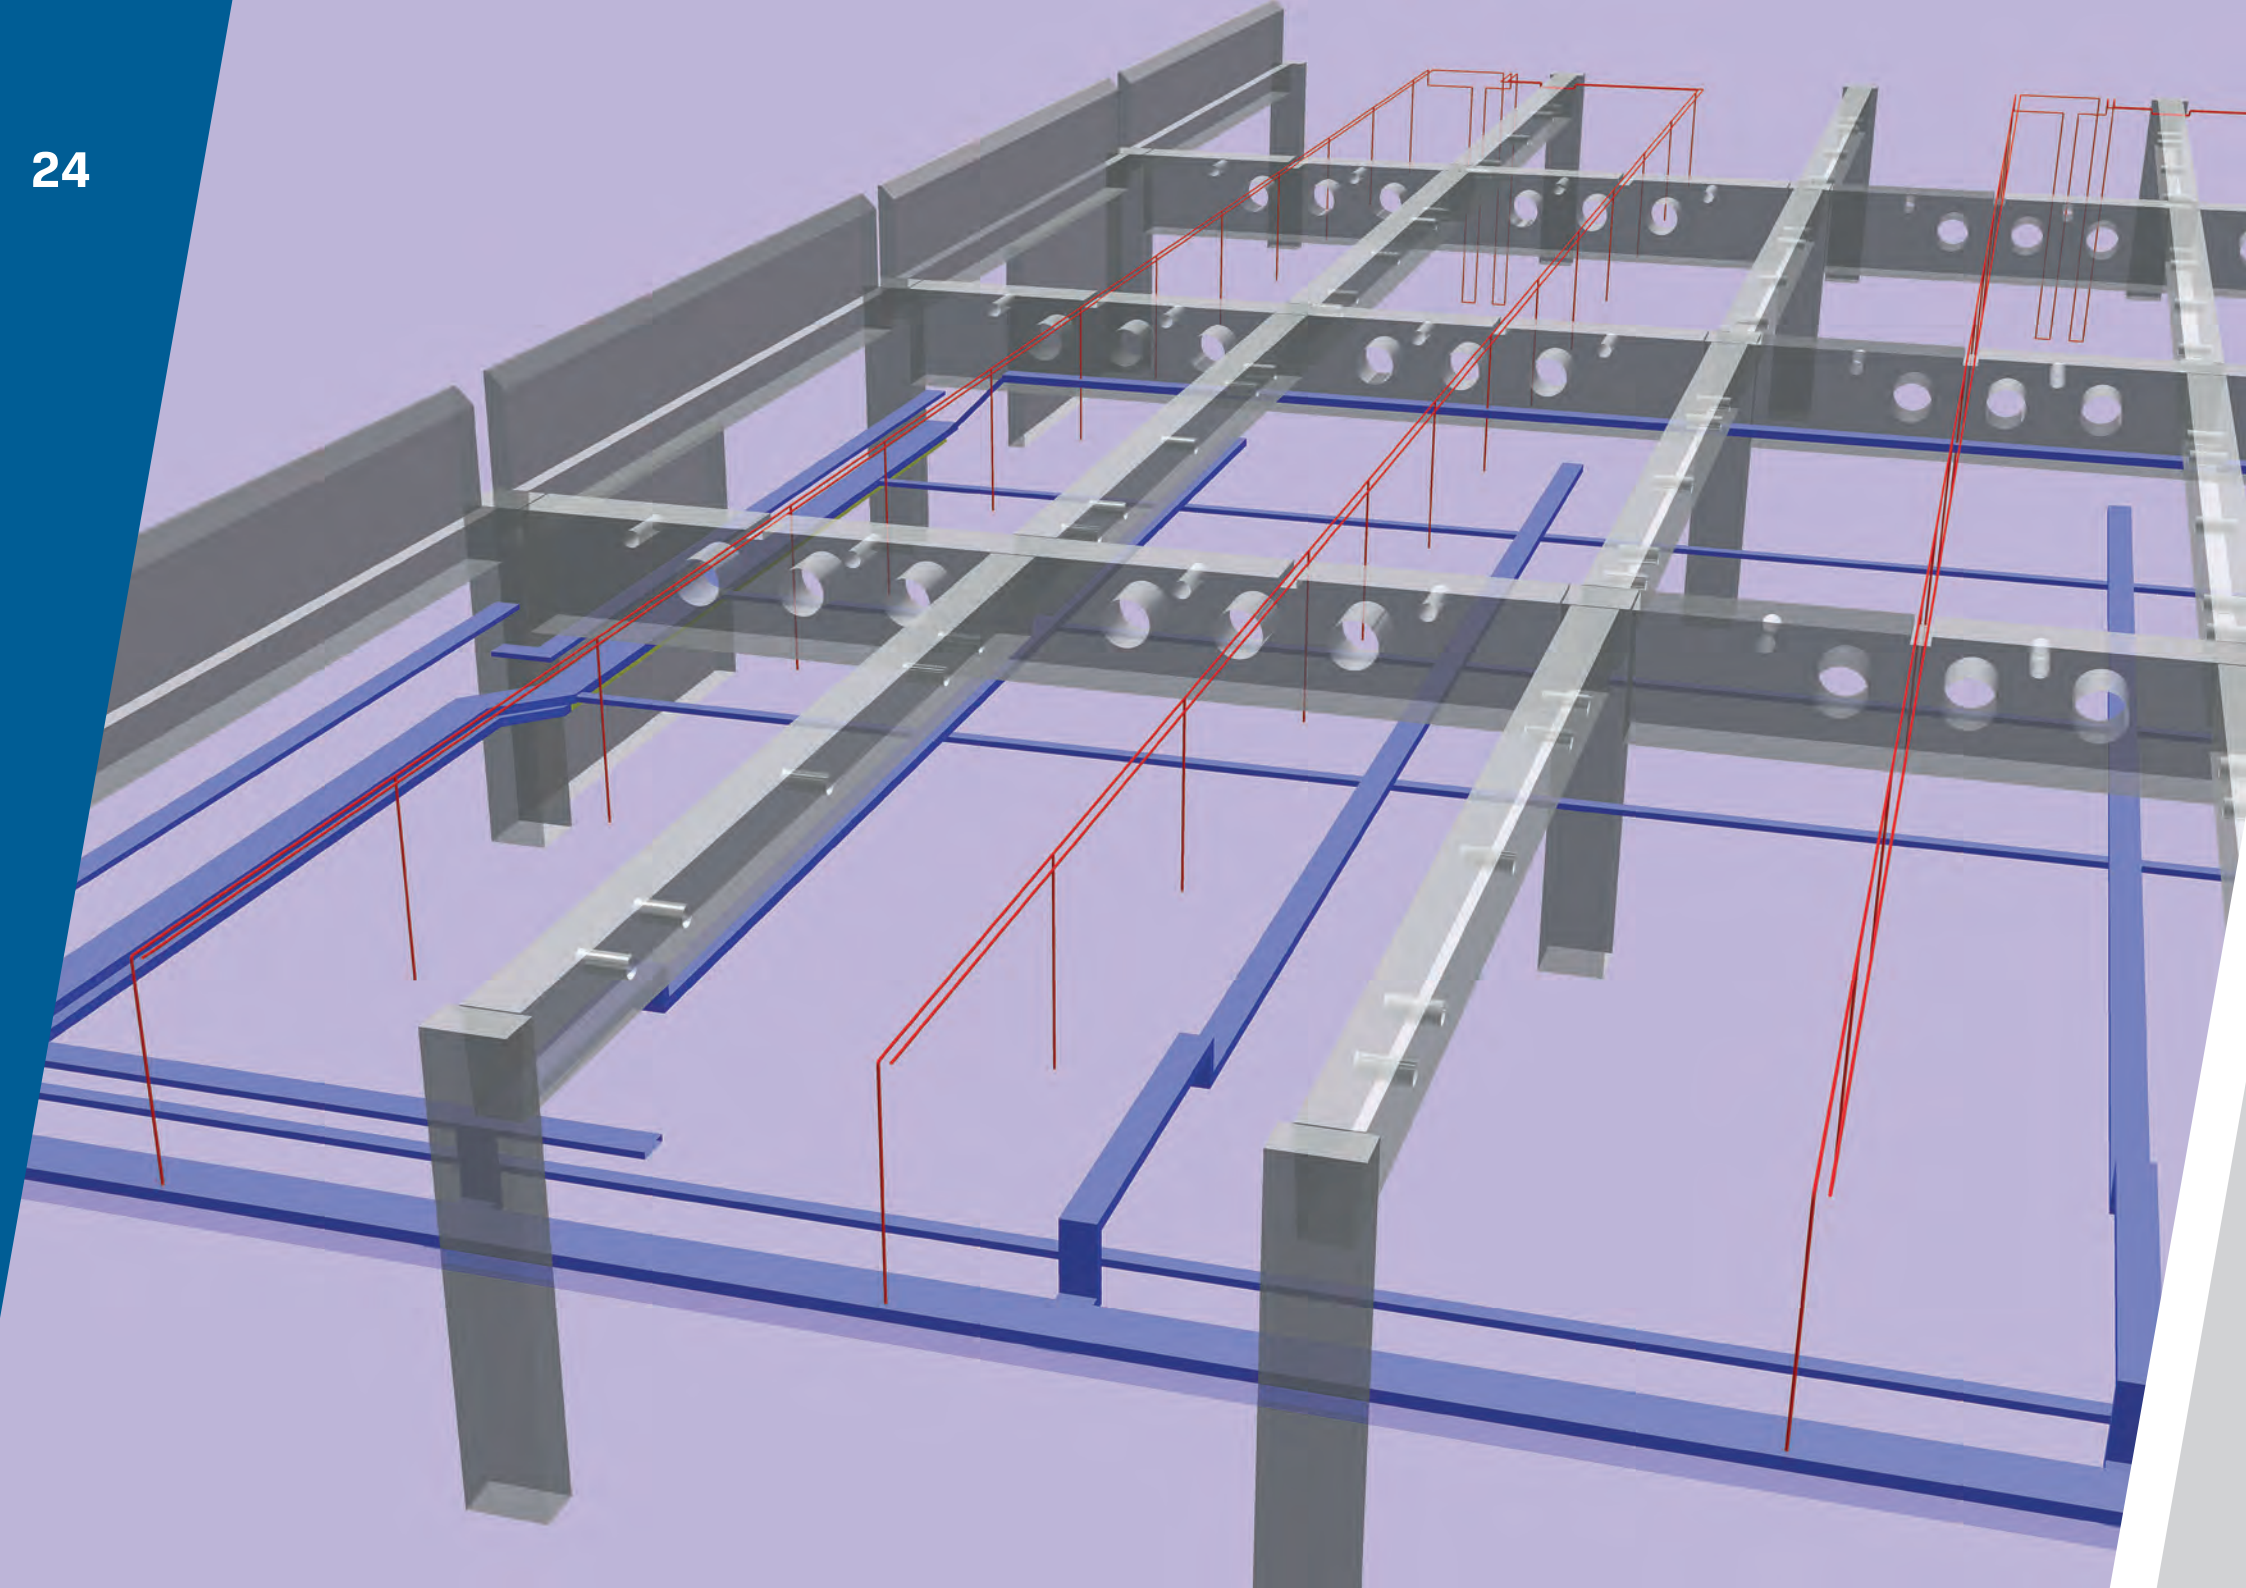

As always with AX300**0**, you can find all the necessary sprinkler components in the library.

Your advantages at a glance

Detailed display of all components with safety couplings and clamp saddles

Definition of pre-installation groups and graphical analysis

... does ~~not~~ belong to

The electric base module has all the necessary functions for a typical building services planer to coordinate all installations.

Your advantages at a glance

Use room books for DiaLux light calculations

Carry out 3D transmission planning

Position assembly parts

Generate schematics

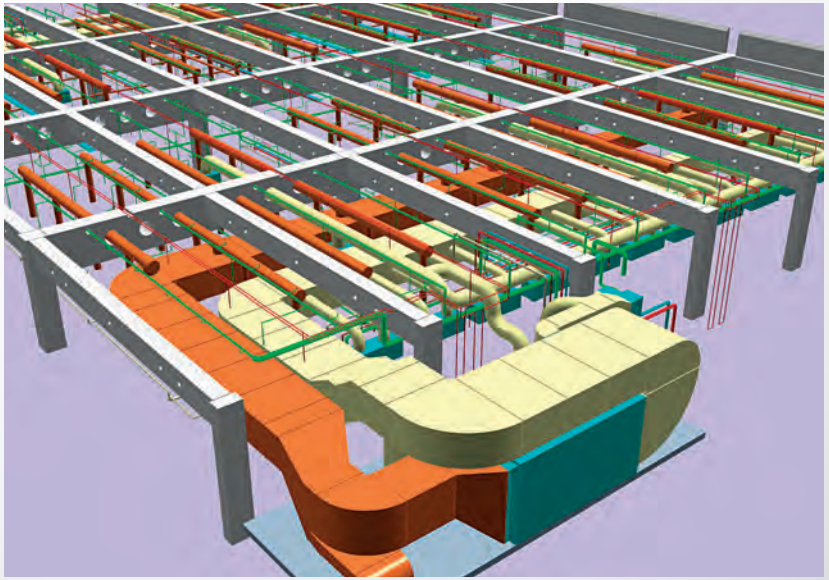

Flexible analyses

KPMG

... everyone can produce eye-catching plans - time plays a decisive role, as it is your money

Always reach the target faster
